AvePoint EnPower
Manage Microsoft 365 the Way That Makes Sense to Your Organization

Manage Multiple
Microsoft 365 Tenants In One Place

Right-Size Administration

Tailor and align administration permissions across your M365 tenants to meet your operational and security needs. With our RBAC architecture, daily tasks like resetting a user's password, setting up a new resource mailbox, or clearing out inactive SharePoint sites, will only be accessible to admins who require it. You choose how admin permissions are structured - by application, location, business unit, department, tiered IT support - whatever makes sense for your organization.

Maximize Adoption & ROI

Ensure your organization gets the most out of Microsoft 365 with consolidated activity dashboards. Understand what apps users most depend on, whether they are using mobile or desktop devices more, or which SharePoint sites have the highest impact on the organization. Dive deeper by application and discover which teams leverage features like Teams calls, SMS, or chats and if the quality of the connection might be the reason why others are not using them. You've invested, safeguard its use.
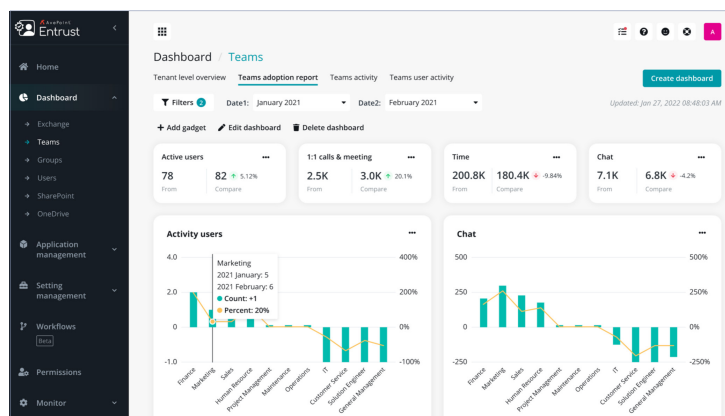

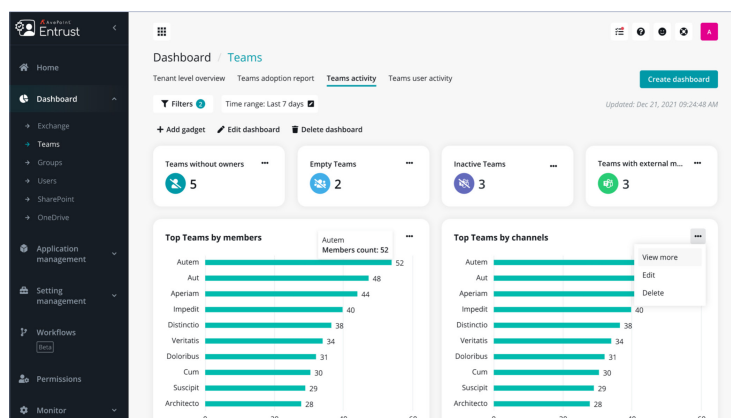

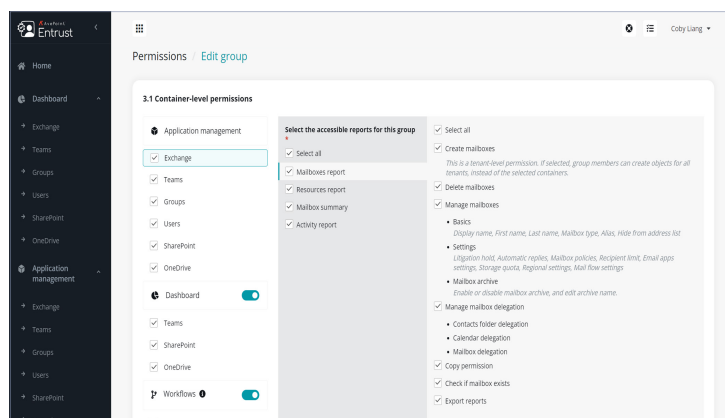

Centralize & Monitor Activity

Streamline how you gather and access admin logs across Microsoft 365 by centralizing all audit and job information in one central location. Quickly identify and get to the root of why a job was unsuccessful or review in bulk to see if any trends need remediation. Break down visibility into audits and jobs one step further by only giving access to admins that need it.

ALIGN ALL MICROSOFT 365 TENANTS WITH YOUR OPERATION

Whether by M&A, location, or a new business unit, additional Microsoft 365 tenants create additional risk and security challenges for IT. While each tenant poses its own risk with all admins having access to the entire tenant, you've also got multiple admin consoles that need to adhere to the same IT policies. Gain the best of both worlds by giving those admin users access to what they only need while consolidating all tenants into one window – ensuring everyone has the correct access and visibility across the organization.

CONTROL

- **Centralize tenants –** Manage multiple tenants in one place and control who has access to which one and ensure company policies are adhere to in each one.

- **Administration permissions –** For Exchange, Teams, SharePoint Online, OneDrive, Azure Active Directory, and Groups, break down administration permissions and give each admin access to only what they need.

- **Manual trigger and dynamic workflows –** Create and define workflows with a no-code approach and delegate the creation or execution to each admin to address both the needs of IT management and operational flexibility.

- **Audit log –** Quickly generate and export admin user audit reports for Exchange, Teams, SharePoint Online, OneDrive, Azure Active Directory, and Groups.

- **Monitor jobs –** Understand whether a job was successful or unsuccessful. For those unsuccessful, dig into the root cause and fix it.

VISIBILITY

- **Centralized dashboards –** Thru application dashboards, surface critical information in one pane, and act immediately.

- **M365 Adoption tracking –** Understand how users are leveraging M365 with user activity, M365 apps, and user activation charts.

- **Compliance risk report –** A single view that brings together compliance and security information across Exchange, user access, administration, collaboration, and top risks of multiple tenants to mitigate common compliance operational risks.

- **M365 App reports –** Review key activity by application with container-level report charts for Teams, SharePoint Online, Exchange, and OneDrive.

- **Storage Quota –** Know and monitor Group mailboxes and sites storage quotas in your organization over a selected time range. In addition, monitor and track your top SharePoint sites and user OneDrives that use the most storage.
