

Migrating & Restructuring Content for Building Resiliency

The cloud is now the default deployment option for organizations looking to support fast, digital collaboration.

Now that the pandemic has instigated additional cloud consolidation, it's time for teams to regroup to evaluate and optimize processes, data, and their platforms. Organizations may need to once again look towards migration to respond to mergers, acquisitions, divestitures or changing business needs.

But how do you choose a migration solution that can scale with your needs?

Due to product maturity, security risks or organizational requirements, there is an increasing need for organizations to migrate content from one cloud provider to another.

As the rate of data stored, utilized and consumed by organizations increases, so does cloud usage. This increased storage usage can greatly impact the next migration, which is usually from one cloud provider to another, as organizations become more dependent on their content being available all the time.

Because of this increased storage usage and dependency, the migration between platforms becomes more complex and costly in terms of planning, migration tool and service costs, and end-user impact.

Which Migration Strategy is right for your customer?

There's a lot to consider when it comes to choosing a cloud migration strategy that'll work best for your client's organization.

AvePoint's migration services can get them to their source destination faster and with less risk.

If you are facing a particularly tricky migration, don't have bandwidth across your team, or just want someone with more experience by your side, migration services may be right for you.

Migration services can save a lot of time in the long run especially if your client's source environment is filled with customizations that won't be compatible with your target environment.

Companion Guide: Office 365 and SharePoint Migration Checklist

Master Microsoft migration with this simple and comprehensive checklist outlining a phased approach of Discovery, Planning, Promoting, and Moving your organization to SharePoint or Office 365.
