# AvePoint®

The Most Advanced Platform for SaaS & Data Management

Powered by AvePoint Online Services

AvePoint is the largest Microsoft 365 data management SaaS solutions provider. Our Confidence SaaS Management Platform spans Microsoft 365 and more than a half dozen cloud platforms, supporting the collaboration of 9 million users across 7 continents. Our SaaS solutions are also available to managed service providers via more than 100 cloud marketplaces, so they can better support and manage their small and mid-sized business customers. For more information, visit **www.avepoint.com**.

The Confidence Platform builds on this scalable, secure architecture to migrate, manage, and protect saas applications and data, enabling transformation, governance, and compliance.

COLLABORATE WITH CONFIDENCE

Establish an operational model for SaaS collaboration: Centralize management and administration, but delegate functions to different roles or business units as needed

Security, audit and regulatory controls: Implement, enforce, and prove that access and configuration policies are providing ongoing compliance with internal or regulatory requirements

Access Management and Risk Assessment: Gain insight into who has access to what and where the business is at risk

Cost Optimization and Service Consolidation: Budget and maximize ROI for SaaS subscriptions and entitlements

CONTROL SUITE
for governance

Migration: Move and transform legacy data into modern cloud SaaS platforms

M&A and Content Restructuring: Merge, split, and re-organize your content and collaborative workspace to reflect ongoing business changes

LOB and Industry Solutions: Leverage modern technology and innovations to transform legacy business processes

Enable & Measure Transformation: Equip your workforce to leverage new innovations and measure engagement and transformation across the org

MODERNIZATION SUITE
for transformation

Business Continuity and Data Protection: Protect against ransomware, accidental deletions, user error, and disasters

Scan and Protect Content: Automate tagging, classification, protection to protect data and prevent loss

Storage Optimization: Prune stale or unneeded content from active systems to save cost and improve quality, but retain for future use

Records Management: Automate content compliance and records retention with purpose-built tools for RM teams

RESILIENCE SUITE
for data protection & compliance
