eDiscovery for Exchange Online

AvePoint Cloud Backup
For Microsoft 365

The Need for e-Discovery

When a reasonable expectation of litigation exists, organizations are required by The Federal Rules of Civil Procedure to preserve electronically stored information (ESI), including emails to be presented as evidence in a legal proceeding.

Why Do You Need Backup?

Today, Microsoft offers a native eDiscovery tool that empowers global, compliance or IT Administrators to identify and preserve ESI. During this time, the content cannot be modified or destroyed. While you can leverage this capability as needed, your organizations' data might still be at risk.

Second Copy

While eDiscovery hold preserves important data, it can also impact user productivity. Having a backup tool ensures business continuity.
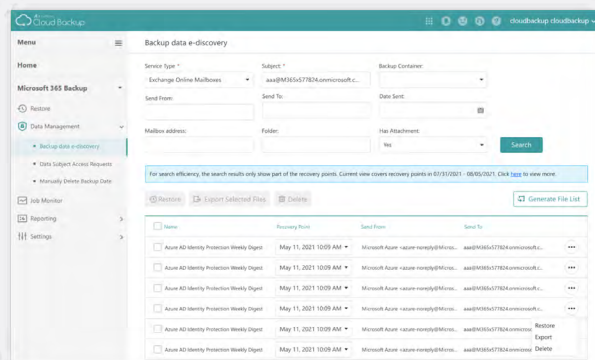

How AvePoint Can Help:

We've implemented an eDiscovery framework that lets admins find content across a tenant, searching for e-mails sent to multiple users or identifying data spillage in multiple mailboxes.

Cloud Backup eDiscovery provides tenant-wide search capabilities for Exchange content to identify data across multiple scopes in M365 backup. This metadata-based search can allow users to find, export, or delete content across multiple containers from a single-pane-of-glass.
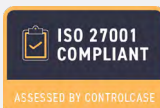

This is only enabled with an eDiscovery license.

Eligible to be added on to any tier (Flex, Core, Standard) as a per-user, per-month add on price. Contact your Account Executive for details.
