

Data Security Solutions for Google Cloud

Insights and tools to secure collaboration

There's tremendous opportunity in your data

Organizations that transition to Google Workspace see a 30% increase in collaboration. Today's data leaders are tasked with driving more efficient and secure business practices while managing the spectrum of risk and opportunity. Organizations can build AI confidence that transforms their business through more secure, governed and resilient data strategies.

AvePoint's Confidence Platform helps data leaders go beyond secure to more effectively manage collaboration and drive secure AI innovation in Google Workspace.

Challenges Facing Data Leaders

Manage Risk & Build Resilience

40% of data breaches involve data stored across multiple clouds. Managing risk and building resilience across hyperscale environments is critical to protect organizations from the evolving risk landscape.

Lead AI Adoption

Only 6% of AI pilots have progressed to broad organizational deployment. Organizations are struggling to establish data security and governance for Gemini to ensure role-appropriate results.

Compliance & Global Regulation

More than 160 countries have passed data protection laws. Meeting cross-cloud compliance is increasingly difficult without advanced tools that can simplify data classification and records management.

Drive Cost Savings & Efficiency

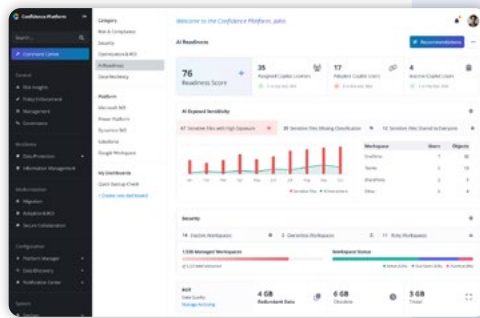

Global spend on SaaS technology will exceed \$700B in 2025. Technology leaders are under increasing pressure to manage overhead while adopting new tools and proving ROI.

My biggest advice to other IT folks using Google Workspace is to take a look at Cloud Backup. Nothing else compares in terms of functionality, ease of use, and support. The product sells itself, especially when compared to Google Vault."

- Eric Bertram | Director of Technology | Crete-Monee School District 201-U
