

Empowering Government Agencies with Proactive Data Security and Robust Data Management

AvePoint empowers digital transformation in government agencies across Australia and New Zealand (ANZ), enabling data governance and sensitive data protection across Microsoft 365. This ensures compliance, resilience, and readiness for AI adoption. Our IRAP-assessed solutions help government entities meet strict compliance requirements, proactively assess risk, and ensure uninterrupted access to mission-critical information.

STRENGTHEN SECURITY AND MINIMISE RISKS

Government agencies handle highly sensitive data that must be protected from breaches, unauthorised access, and mismanagement. AvePoint provides full visibility into where information resides and who can access it — enabling you to spot vulnerabilities and address security gaps before they become incidents.

Automated safeguards enforce proper sharing and permission settings, reducing the risk of data leaks and compliance violations. A centralised dashboard enables IT teams to monitor and resolve misconfigurations and policy breaches across Microsoft 365 environments, streamlining risk management and ensuring consistent enforcement of security policies.

As AI adoption accelerates, risk management becomes even more critical. AI systems like Microsoft 365 Copilot rely on vast data access, which can introduce new attack surfaces and oversharing risks if not properly governed.

AvePoint helps agencies proactively identify and secure sensitive data, ensuring AI tools operate within safe and compliant boundaries.

EMPOWER INFORMATION OWNERSHIP AND ACCOUNTABILITY

Effective governance starts with clear ownership. AvePoint aligns administration with the right data owners, enabling agencies to delegate responsibility while maintaining oversight. Automated rules for access and external sharing reduce manual workload and strengthen the overall security posture.

Our platform supports scalable governance frameworks that promote shared accountability. Users are empowered to manage their data responsibly, while IT retains control through guardrails and audit-ready reporting. This balance ensures secure collaboration within government guidelines and supports safe AI integration.

AvePoint's records management solution is purpose-built for the public sector, helping agencies modernise their approach without compromising compliance. It supports adherence to records management standards and enables agencies to confidently manage information throughout its entire lifecycle.

PROTECT AND MANAGE INFORMATION WITH CONFIDENCE

Compliance and resilience are essential in the public sector. AvePoint helps agencies meet regulatory obligations through automated policy enforcement and continuous monitoring. Our platform supports proactive compliance by identifying risks, enforcing controls, and maintaining audit trails beyond the native lifecycle of Microsoft 365.

Operational continuity is critical for government agencies. AvePoint ensures seamless backup and content restoration across Microsoft 365 and other cloud environments. Agencies can securely restore data when needed — minimising disruption and maintaining uninterrupted access to essential information.

As AI becomes embedded in daily operations, resilience must extend to AI systems. AvePoint's Confidence Platform supports AI governance by embedding shared accountability into data management frameworks, ensuring that AI-generated content remains secure and compliant.

AvePoint simplifies governance, automates compliance, and protects sensitive data. Our platform prepares data environments for secure, compliant use of AI tools such as Microsoft 365 Copilot. Agencies can leverage Copilot while maintaining control over access, sharing, and lifecycle management.

By providing advanced analytics to monitor AI usage, tracking prompt usage, and benchmarking AI adoption across teams, **AvePoint delivers vital insights for government agencies** to refine their AI strategy, improve training, and maximise returns on AI investments.

THE AVEPOINT CONFIDENCE PLATFORM ADVANTAGE

The AvePoint Confidence Platform is trusted by government agencies across ANZ to deliver proactive security, robust governance, and operational resilience. It enables agencies to modernise with confidence — ensuring that data is protected, ownership is clear, and compliance is maintained.
