

Unleash Power Platform Innovation. Govern with Confidence.

By 2029, low-code technology platforms will power 80% of mission-critical applications globally. (Gartner)

The Challenge

Rapid and decentralized creation of apps, flows, agents, environments, Power BI Reports, and “Pages” in Power Platform can lead to data sprawl, security risks, and compliance gaps that traditional IT controls struggle to manage.

AvePoint’s Solution

With real-time visibility, delegated administration, and proactive risk monitoring, AvePoint enables IT and business users to collaborate while ensuring every app, flow, and agent is secure, compliant, and driving business value.

Empowering Secure And Agile Innovation

The AvePoint Confidence Platform helps IT and governance leaders reduce data exposure risks and streamline governance for Power Platform, enabling faster decision-making, improved compliance, and more time for strategic work.

Reduce Risk

Prevent oversharing and unnecessary access of Power Platform assets. Successfully satisfy audit and compliance assessments. Engage end users to ensure platform growth is strategic and manageable.

Maximize Investment

Reduce manual governance efforts, right-size premium connector costs, and scale solutions to accommodate growth and adoption in order to improve ROI.

Boost Efficiency

Streamline governance processes with automated policy enforcement and centralized management of assets, allowing IT to focus on higher-value tasks.

End-to-End Governance That Scales

Full visibility, proactive lifecycle management, and automated governance ensure continued business value and streamlined policy enforcement for Power Platform Assets.

Gain Visibility

Agents, Apps, Flow & Reports Inventory

Employ continuous discovery of new elements, access and permissions within Power Apps, Power Automate and Copilot Studio.

Monitor Continuously

Lifecycle Management

Configure a re-certification profile to ensure assets to ensure assets have a defined purpose and are still driving business value. Manage ownership, and remediate orphaned assets.

Involve End-Users

Attestation

Empower end-users to take ownership of their assets, ensuring they remain relevant and secure, and contributing to the health and hygiene of their Power Platform solutions.

Control With Granularity

Policy Enforcement

Ensure proper DLP or other policies are implemented for all assets. Reduce administrator accounts with simple RBAC configurations.

Harness Insights

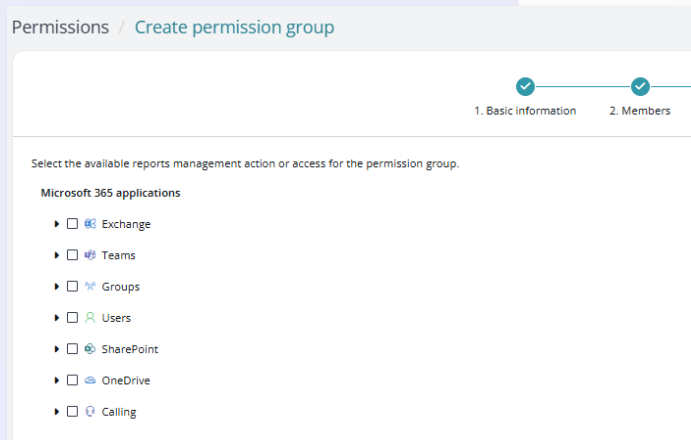

Unified Dashboards

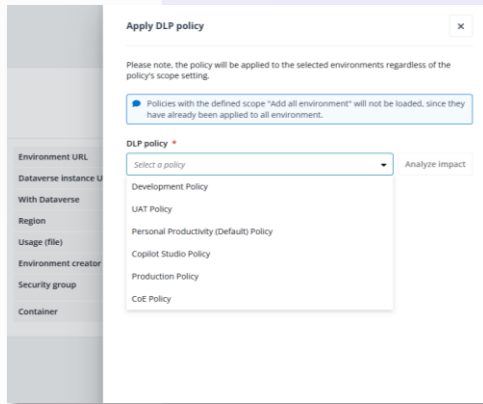

Monitor trends in who is creating Power Platform assets over time, and surface risky access or data vulnerabilities to prioritize remediation.

Empower Admins And Protect Your Platform

Flexible Governance for Power Platform Assets

- Enable flexible admin delegation to regions, business units, roles, etc. without granting broad privileges to native administrative roles.
- Use simple role-based access control (RBAC) configurations to reduce the amount of administrator accounts required, while still enabling users to manage their assets.
- Grant admins temporary access, driving agility without compromising governance.
- Apply DLP policies to environments to ensure admins are responsible for their own scope of data.

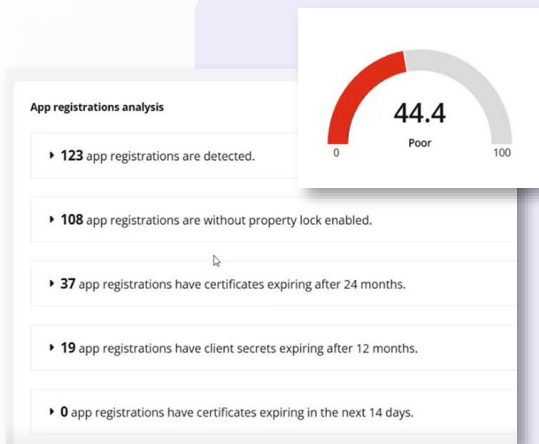

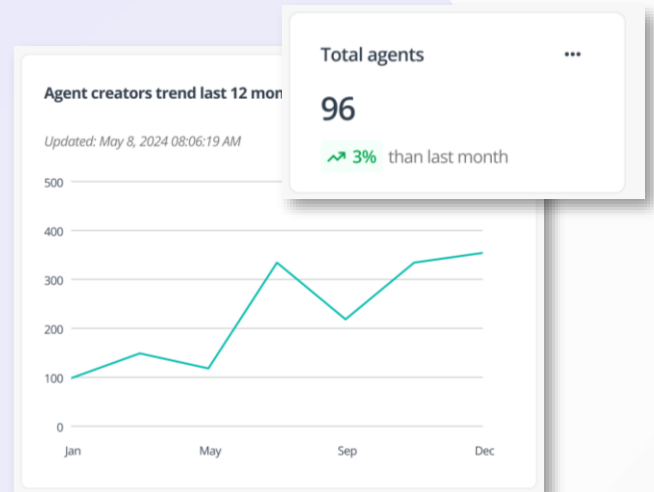

Go Beyond The Surface Of DLP Creation And Enforcement

- Define safe, non-business, and blocked connectors, and configure which actions users and connectors can make with granular DLP policies.
- Deploy granular sharing controls for assets and implement controls above and beyond DLP at flow action and user level.
- Tailor DLP policies, set access restrictions by Environment, and create security groups to ensure only the right people are creating within an Environment.

Manage And Govern Generative and Agentic AI

- Monitor trends in agent creation, usage and access through our Copilot Studio Agent Dashboard to remediate risky access, maintain compliance, and drive adoption.
- Drive visibility and accountability with custom metadata and business sponsors for agents.
- Enforce environment-level policies to limit custom Copilots, and gain visibility into builders, co-owners and endpoints.

Drive Accountability for Enterprise Applications and Risk

- Enforce policies around who can access Power Platform assets, and what data assets can pull from.
- Configure an intuitive outreach workflow to verify ownership, access control, and classification.
- Automate lifecycle policies to dispose of assets that are no longer driving value.

Automate Operations, Governance And Security

- Set and forget common provisioning, management and lifecycle workflows to increase IT productivity.
- Create automated, dynamic workflows based on events or conditions that you set.
- Set manual trigger workflows on actions the team may need to intervene on before taking corrective action.

Centralized Visibility and Action

- Leverage exportable reports, cross-tenant visibility, and delegation by territory for informed decision-making.
- Understand creation trends, and where there may be duplicate assets to consolidate.
- See which objects are used most and may need their own Environment as a critical business app or flow.
- Audit the changes made in a workspace through bulk timeline exports.

About AvePoint

Beyond Secure: AvePoint is the global leader in data security, governance, and resilience, going beyond traditional solutions to ensure a robust data foundation and enable organizations everywhere to collaborate with confidence. Over 25,000 customers worldwide rely on the AvePoint Confidence Platform to prepare, secure, and optimize their critical data across Microsoft, Google, Salesforce, and other collaboration environments. AvePoint's global channel partner program includes approximately 5,000 managed service providers, value-added resellers, and systems integrators, with our solutions available in more than 100 cloud marketplaces
