

DocAve SharePoint Migrator for Microsoft® SharePoint® and Microsoft 365 Migration

Pre-Migration Discovery

Inventory source
environments with
detailed discovery and
pre-scan, to inform
your migration project
planning – including
required mappings,
prioritization, and
content or customizations
requiring re-work.

Legacy Asset Protection

Minimize business user interruption by ensuring critical information residing in legacy content sources – including all associated metadata – is preserved and available in SharePoint or Microsoft 365.

Flexible Migration and Scheduling

Empower administrators to plan migration jobs according to business needs with granular or bulk content migration as well as flexible job scheduling.

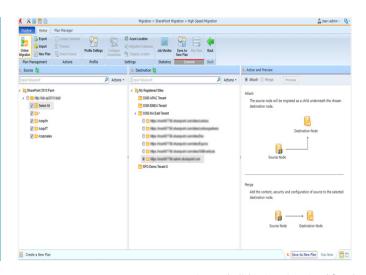

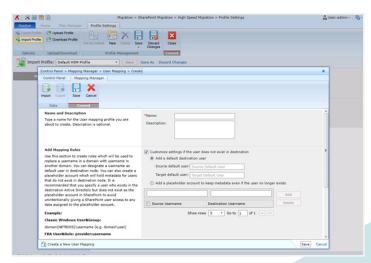

High Speed Migration to Microsoft 365

Migrate large quantities of content from file systems, Livelink, SharePoint Server, or other legacy systems to Microsoft 365 quickly and easily, to overcome throttling limitations and accelerate your cutover to the cloud.

Migration to SharePoint Made Easy

DocAve Migrators allow administrators to perform full-fidelity content migration from previous versions of SharePoint to SharePoint Server 2019, SharePoint Server 2016, SharePoint Server 2013, and Microsoft 365 – SharePoint Online and OneDrive for Business. DocAve's efficient and reliable data transfer is unique in its ability to migrate content while retaining all of the associated metadata, enabling organizations to maximize their return on investment and gain more value from Microsoft's latest release. And with High Speed Migration for Microsoft 365, you can make the transition into Microsoft 365 quickly and efficiently, making cloud-based productivity a reality.

Point-and-click migration simplifies the transfer of content into SharePoint.

PRE-MIGRATION

- Delegate migration plan management based on administrative roles
- Scan source content prior to migration to identify the scope of migration, and detect any illegal characters, user permissions, user names, user domains, and other elements that must be mapped in order to migrate successfully into SharePoint Server or SharePoint Online
- Configure migration plans according to business needs with granular content selection, as well as customizable filtering options based on content properties, and perform test runs to validate migration plan configuration
- Bring your own Azure storage, or let DocAve automate the creation, encryption, and disposition of temporary Azure storage required for high-speed migration at no extra cost

OPTIMIZED USER EXPERIENCE

- Create dynamic rules based on out-of-the-box interfaces to customize mappings and filter policies to meet specific business needs, including the ability to create new Managed Metadata in the destination. Keep source and destination environments in sync with customizable scheduling to minimize business disruption throughout the course of the migration project
- *To migrate content within or across SharePoint environments of the same version, use DocAve Content Manager.

MIGRATION WITH FULL FIDELITY

- Preserve all metadata including security settings, attributes, and properties – with full fidelity, utilizing customizable mappings to properly represent legacy elements and quickly take advantage of the features in the latest version of SharePoint and Microsoft 365 features such as Managed Metadata
- Migrate workflows, like SharePoint Designer and Nintex, to SharePoint Server and Microsoft 365, and actions, like user alerts and customized forms, to Microsoft 365 – SharePoint Online and OneDrive for Business
- Run 2007, 2010, 2013, 2016, and 2019 high-speed migration jobs in Offline Mode to import discs to Azure, or in Online Mode to import directly to Azure across live networks
- Migrate Managed Metadata with flexible options to migrate an entire Managed Metadata Service, specific term sets and all the terms within them, or the granular terms and their parents associated with the source content
- Perform full and subsequent incremental migrations to keep network bandwidth resources optimized, only migrating content that has been updated since the last migration
- Automate construction of your new SharePoint environment on-the-fly during your migration
- Migrate online over existing networks, or offline to securely migrate data across firewalls
- Migrate into pre-created sites, or create containers on the fly
- Resume migration jobs from wherever they stopped or failed
