

# Understanding tyGraph's new look and feel

AvePoint tyGraph became generally available as of April 8, 2024. With that release, AvePoint tyGraph became the primary version for new customers and future innovation. This document is intended for anyone currently on tyGraph Classic looking to prepare for upgrade to the Confidence Platform.

## What is it?

AvePoint tyGraph is the new version of tyGraph inside AvePoint's Confidence Platform.

The Confidence Platform is a web portal that hosts a family of AvePoint products and serves as a single hub for access and management. As of 8 April 2024, tyGraph is joining those other products in the same portal. For details, please see the [AvePoint Online Services guide](#).

## What's different?

AvePoint tyGraph is a web-based application that gives you a central view to data collection, reports, access, and permissions. You and other users you grant Admin privileges will have an Administration section for many of these operations such as integrating HRIS data configuring data privacy settings. It is important to remember Power BI is not going away. Power BI reports will be connected to data collection in the Confidence Platform. The same goes with the

SharePoint web part which will be shown in SharePoint but managed from the Confidence Platform.

This new version of tyGraph will include an improved report experience plus an Administration Section for self-service management. For details on the full experience check out our [About AvePoint tyGraph](#) page.

Benefits:

AvePoint has an extensive experience with diverse industry security needs, and the Confidence Platform ensures robust security with certifications like CSA Star Level 2, SOC 2 Type 2, ISO 27001, ISO 27017, ISO 27701, and FedRAMP. This portal will bring you closer to the workings of tyGraph and at the same time make the tool easier to use.

Control the tyGraph data collection engine

View simplified dashboards without Power BI

Configure privacy settings

Add & remove users for report sharing

Connect to Power BI & SharePoint web parts

Added security

Integrate HR data

View tyGraph usage and audit log

## Detailed Functions:

Area	Detail	Before (tyGraph Classic version)	After (AvePoint tyGraph)
POWER BI	All Reports	Dataset (Semantic Model) is connected to tyGraph Classic source. Connection information is emailed from tyGraph Ops Team	<p>All reports interfaces stay the same so users will not notice any changes. The underlying connection is changed to AvePoint tyGraph with self-service credentials.</p> <p>To see specifics by product on how you will set up your new connection, please see this <a href="#">guide</a>.</p>
	Premium Capacities	Premium Capacity paid <b>for</b> in your tenant.	<p>Two options for your premium capacity workspaces.</p> <p>A. Continue to pay for Premium Capacity (as before) Nothing changes except the connection of the semantic model. (see above)</p> <p>OR</p> <p>B. Use tyGraph Power BI reports embedded in AvePoint tyGraph to share reports broadly without the need to host yourself in Power BI. Additional SKU required.</p>
TYGRAPH ONLINE	Custom Builds	Users navigate to tyGraph Online to see their customized reports	<p>A. Customized reports can be requested as an export file from tyGraph Online so that you can load them into your own Power BI Service. They can be loaded and maintained by your organization in your Power BI Service. tyGraph</p>

---

Online custom reports will be turned off after migration.

OR

B. If there are tyGraph Online reports that are not sufficiently replicated in the Confidence Platform, speak to your account representative to discuss your requirements.

Standard Reports

In tyGraph Online

Users can access the standard set of Power BI reports embedded in the analytics section of AvePoint tyGraph. Additional SKU required.

Web-based reports in AvePoint tyGraph contain the most used information from the Power BI reports and should fill most requirements.

Grant Access to Reports

[Manage Access area](#) in tyGraph Online. Group-based access is not supported in tyGraph Online, users must be added individually.

Add people in the Administration “Users” section. Users may be added individually or by Group. Group-based access is now supported in AvePoint tyGraph streamlining access management.

Site Owner Report

tyGraph Online

A security trimmed site owner view is applied to a row level security (RLS) role and shown in tyGraph Online

Web Reports – Sites I Own

Now you can see this information in a web report which loads faster, supports localization, is more secure, and easier to share with users.

Community Owner Report

tyGraph Online

Web Report – Community Insights (October Release)

---

<b>ADMIN</b>	Data Protection Settings	Contact tyGraph Support to make changes	Configure yourself in the Administration section.
	Data Retention	Contact tyGraph Support to make changes	Configure yourself in the Administration section.
	Harvest Status	Contact tyGraph Support for status updates	View status in the Administration section.
	Demo Reports	<a href="#">tyGraph Test Drive (online)</a>	Use Demo Mode in AvePoint tyGraph
<b>PAGES WEBPART</b>	All Webparts	Need to use API Key which is less secure and manual to authenticate for each person installing the webpart.	Anyone granted access in AvePoint tyGraph will be able to install and connect to the webpart without needing a key. This lets anyone you grant access to install the webparts, just make sure you re-connect for all webparts that are installed after the migration takes place.
	Report Bar		There are no changes to the report bar and should be viewed properly as long as the administrator has correctly updated the tyGraph Pages Engine in the app catalog. Please follow our <a href="#">guide for installation support</a> .
